The Department of Mathematics

2022–23–B term

Course Name Algebra 1 for CS

Course Number 201.1.7011

Course web page
https://math.bgu.ac.il//en/teaching/spring2023/courses/algebra-1-cs

Lecturer Dr. Guy Landsman, <glandsman@post.bgu.ac.il>, Office

Office Hours https://math.bgu.ac.il/en/teaching/hours

Abstract

Requirements and grading[1]

Course topics

1. General background: sets and operations on them, Complex numbers: definition (via ordered pairs), addition and multiplication, inverses, adjoint, absolute value. Real and complex polynomials and their roots.

2. Fields: Definition, properties, examples: Rationals, reals, complex numbers, integers mod p.

3. Linear equations over fields, matrices and elementary row operations, rank of a matrix, solutions of homogeneous and non homogeneous systems of linear equations and the connections between them.

4. Vector spaces over fields, subspaces, bases and dimensions, coordinates change of coordinate matrix, row rank as rank of a subspace, sums, direct sums of subspaces and the dimension theorem.

5. Matrices multiplication, the algebra of square matrices, inverse determinants: properties, Cramer's rule, adjoint and its use for finding the inverse.
