## BGU Probability and Ergodic Theory (PET) seminar

On Thursday, November, 14 2024

**At** 11:10 - 12:00

In 101-

Konstantin Kozlov (BGU)

will talk about

## Enveloping Ellis semigroups as compactfiications of transformations groups.

Abstract: The notion of a proper Ellis semigroup compactfication is introduced. Using Ellis's functional approach their connection with equiunfiormities on a topological group is established. Proper Ellis semigroup compactfication of a topological group G from the maximal equiunfiormity on a phase space in the case of isometric action (on a discrete space, on a discrete chain, as liner isometries of a Hilbert space) is described. Its connection with Roelcke unfiormity on G is established.
